

ACADEMIC REGULATIONS

College AI Assistant Training Document

Document Type: Academic Policy

Version: 1.0

Status: Synthetic Training Document

1. Introduction

These Academic Regulations define general academic requirements for undergraduate students, including attendance, credits, assessment, academic progression, examinations, final-year projects, graduation, and academic integrity.

These regulations are created specifically as a **synthetic document for an educational RAG/AI Assistant workshop**. They are not the official regulations of any real university or college.

Students should always verify academic requirements with their institution's official academic office.

2. Attendance Requirements

Attendance is an important requirement for students enrolled in academic courses.

2.1 Minimum Attendance

Students should maintain a minimum of **75% attendance** in each course to be normally eligible to appear for the end-semester examination.

For example:

- A student with 80% attendance satisfies the normal attendance requirement.
- A student with 75% attendance satisfies the minimum requirement.
- A student with 70% attendance does not satisfy the normal 75% requirement.

2.2 Attendance Between 65% and 74%

Students whose attendance is between **65% and 74%** may be considered for attendance condonation, subject to the institution's approved process.

The student may be required to:

1. Submit a formal request.
2. Provide supporting documentation when applicable.

3. Obtain approval from the appropriate academic authority.
4. Complete any additional requirements specified by the institution.

Condonation is **not automatic**.

2.3 Attendance Below 65%

Students whose attendance is **below 65%** are normally not eligible to appear for the end-semester examination.

Any exception must be formally approved according to applicable institutional rules.

3. Academic Credits

Academic programs consist of courses and other academic components that carry credits.

3.1 Undergraduate Credit Requirement

Under this synthetic academic framework, an undergraduate student must successfully earn **160 credits** to satisfy the standard graduation credit requirement.

The 160 credits may include:

- Core courses
- Professional electives
- Open electives
- Laboratory courses
- Project work
- Internship or experiential learning
- Other curriculum components

The exact distribution of credits depends on the student's academic program.

3.2 Credit Completion

A student must successfully complete the required courses and obtain the corresponding credits.

Simply attending a course does not automatically result in earning its credits. The student must satisfy the applicable assessment and passing requirements.

4. Course Registration

Students should register for courses according to the academic calendar.

Some courses may have prerequisite courses.

For example, a student may be required to complete an introductory programming course before registering for an advanced programming course.

Students should verify:

- Course prerequisites
 - Course availability
 - Credit requirements
 - Registration deadlines
 - Examination requirements
-

5. Assessment

Assessment may consist of multiple components.

Typical assessment components include:

- Assignments
- Quizzes
- Laboratory work
- Practical examinations
- Mid-semester examinations
- Projects
- Presentations
- End-semester examinations

The exact weightage of each component may differ between courses.

Students should refer to the course instructor or department for the applicable assessment structure.

6. End-Semester Examination Eligibility

Students must satisfy the applicable attendance and academic requirements before appearing for an end-semester examination.

A student may be prevented from appearing for an examination if the student does not satisfy mandatory requirements.

Students should check their examination eligibility before the examination period.

7. Academic Progression

Students are expected to make satisfactory academic progress throughout their program.

Academic progression may depend on:

- Completed credits
- Passed courses
- Failed or pending courses
- Prerequisites
- Academic performance
- Institutional progression rules

Students with pending courses should consult the academic department regarding their registration and progression options.

8. Final-Year Project

Students in their final year may be required to complete a project.

A final-year project should normally include:

1. Identification of a problem.
2. Definition of project objectives.
3. Background or literature study.
4. Selection of appropriate technologies or methodologies.
5. Implementation or experimentation.
6. Testing and evaluation.
7. Documentation.

8. Final presentation or demonstration.

Students should work under the guidance of an assigned project mentor or supervisor.

9. Project Documentation

Project documentation should clearly describe:

- Problem statement
- Objectives
- Proposed solution
- Methodology
- Technologies used
- Implementation
- Results
- Limitations
- Future improvements
- References

Students should maintain appropriate records of their project work.

10. Graduation Requirements

A student normally becomes eligible for graduation after completing all applicable requirements.

These may include:

- Required academic credits
- Required courses
- Laboratory requirements
- Final-year project
- Internship requirements where applicable
- Examinations
- Academic clearance

- Administrative clearance

Students should confirm their individual graduation status with the academic office.

11. Academic Integrity

Students are expected to maintain academic integrity.

Academic misconduct may include:

- Plagiarism
- Fabrication of data
- Falsification of results
- Unauthorized collaboration
- Copying during examinations
- Submitting another person's work as one's own
- Misrepresentation of academic achievements

Academic misconduct may be handled according to the institution's disciplinary procedures.

12. Use of Artificial Intelligence

Students using AI tools for academic work should follow the rules specified by their institution and instructor.

Where AI-assisted work is permitted, students should:

- Verify generated information.
 - Understand the submitted work.
 - Avoid presenting another person's work as their own.
 - Follow applicable citation requirements.
 - Protect confidential academic information.
-

13. Student Responsibility

Students are responsible for keeping themselves informed about:

- Academic deadlines

- Attendance
- Examination schedules
- Course registration
- Credit requirements
- Project requirements
- Graduation requirements

Students should not rely solely on informal information when making important academic decisions.

14. Quick Reference

Requirement	Rule
Normal minimum attendance	75%
Possible condonation range	65%–74%
Below 65%	Normally not examination eligible
Undergraduate graduation credits	160
Final-year project	Required where applicable
Academic integrity	Mandatory
