

INTERNSHIP GUIDELINES

College AI Assistant Training Document

Document Type: Internship and Experiential Learning Guidelines

Version: 1.0

Status: Synthetic Training Document

1. Introduction

Internships provide students with an opportunity to apply academic knowledge to practical problems in an organizational environment.

These guidelines describe the general internship process, including eligibility, applications, supervision, attendance, deliverables, evaluation, confidentiality, and completion.

This is a synthetic training document created specifically for an educational RAG/AI Assistant workshop. It is not an official policy of any real institution.

2. Internship Eligibility

Students may apply for internships after completing at least 4 semesters of an undergraduate program under this synthetic guideline.

Additional eligibility conditions may be specified by:

- **The academic department**
- **The placement office**
- **The host organization**
- **The internship role**

A company may require specific technical skills or academic performance.

3. Internship Duration

The standard minimum internship duration under this synthetic guideline is 6 weeks.

An internship may be longer depending on the requirements of the organization and academic program.

The internship duration should be clearly mentioned in the internship offer or approval documentation.

4. Finding Internship Opportunities

Students may identify internships through:

- **College placement cells**
- **Company career websites**
- **Professional networking platforms**
- **Faculty recommendations**
- **Industry contacts**
- **Internship platforms**
- **Career fairs**
- **Hackathons and technical events**

Students should verify that an internship opportunity is genuine before sharing personal or academic information.

5. Internship Application

A typical internship application may require:

- **Resume**
- **Academic details**
- **Technical skills**
- **Portfolio**
- **GitHub profile**
- **Cover letter**
- **Project information**
- **Availability**

Students should customize their application when the role requires specific technical skills.

6. Resume for Internships

An internship resume should highlight relevant skills rather than simply listing every subject studied.

For example, an AI/ML student may include:

- **Python**
- **Machine Learning**
- **Pandas**
- **NumPy**
- **SQL**
- **Data Visualization**
- **Generative AI**
- **APIs**
- **Git/GitHub**
- **Relevant projects**

Students should provide accurate information.

7. Internship Mentor

The host organization should ideally assign an internship mentor or supervisor.

The mentor may:

- **Explain the project**
- **Provide technical guidance**
- **Assign tasks**
- **Review progress**
- **Provide feedback**
- **Evaluate the intern's contribution**

The student should maintain regular communication with the mentor.

8. Faculty Coordinator

Where required by the academic institution, a faculty coordinator may monitor the internship.

The faculty coordinator may:

- Verify internship details
 - Monitor student progress
 - Review reports
 - Coordinate evaluations
 - Confirm internship completion
-

9. Internship Attendance

Interns should follow the attendance and working-hour requirements established by the host organization.

Students should:

- Report on time.
- Attend scheduled meetings.
- Complete assigned tasks.
- Inform the supervisor about planned absences.
- Follow the organization's leave procedure.

Repeated unexplained absence may affect internship evaluation.

10. Internship Responsibilities

Students are expected to:

1. Understand assigned tasks.
2. Ask questions when requirements are unclear.
3. Complete tasks within agreed timelines.
4. Document their work.
5. Participate in meetings.
6. Test their work appropriately.
7. Accept and implement feedback.

8. Follow organizational policies.

11. Internship Project

An internship project should preferably involve a clearly defined problem.

A typical project lifecycle may include:

Step 1 — Problem Understanding

Understand the business or technical problem.

Step 2 — Requirement Analysis

Identify:

- **Inputs**
- **Outputs**
- **Users**
- **Constraints**
- **Expected results**

Step 3 — Technology Selection

Select technologies appropriate to the project.

Step 4 — Implementation

Develop the solution according to project requirements.

Step 5 — Testing

Test the solution using suitable test cases or evaluation methods.

Step 6 — Documentation

Document the approach, implementation, results, and limitations.

Step 7 — Demonstration

Present the completed work to the mentor or evaluation committee.

12. Weekly Progress

Students may maintain a weekly progress record.

A weekly report can include:

Week Number

Tasks Completed

Technologies Used

Problems Encountered

Solutions Implemented

Learning Outcomes

Tasks Planned for Next Week

This helps students track their progress throughout the internship.

13. Internship Deliverables

Depending on the project, expected deliverables may include:

- **Source code**
- **Technical documentation**
- **Project report**
- **Presentation**
- **Demonstration**
- **Weekly reports**
- **Test results**
- **Deployment details**
- **Final evaluation**

Students should submit only material they are permitted to disclose.

14. Confidentiality

Interns may have access to confidential information.

Confidential information may include:

- **Source code**
- **Customer information**
- **Internal documents**

- **Business data**
- **Credentials**
- **Product designs**
- **Internal processes**
- **Unreleased product information**

Students must follow the organization's confidentiality requirements.

Students should never publish confidential company information on public platforms without authorization.

15. Intellectual Property

Work created during an internship may be subject to the host organization's intellectual-property policies or agreements.

Students should clarify:

- **Ownership of source code**
- **Publication rights**
- **Use of company data**
- **Portfolio permissions**
- **Open-source restrictions**

Students should obtain permission before publishing proprietary work.

16. Use of Company Data

Company data should be handled according to organizational policies.

Students should not:

- **Upload confidential datasets to unauthorized websites.**
- **Share customer information publicly.**
- **Store passwords in source code.**
- **Publish private documents.**
- **Use company information for unrelated personal projects without permission.**

17. Technical Documentation

A technical report should generally include:

- 1. Introduction**
- 2. Problem Statement**
- 3. Objectives**
- 4. Existing System or Background**
- 5. Proposed Solution**
- 6. Technologies Used**
- 7. System Architecture**
- 8. Implementation**
- 9. Testing**
- 10. Results**
- 11. Challenges**
- 12. Limitations**
- 13. Future Improvements**
- 14. Conclusion**
- 15. References**

18. Internship Evaluation

Internship performance may be evaluated using multiple factors.

Possible evaluation criteria include:

- Technical knowledge**
- Problem-solving ability**
- Quality of work**
- Task completion**
- Communication**
- Professional behavior**

- Documentation
- Team collaboration
- Learning progress
- Mentor feedback

The exact evaluation method may differ between institutions and organizations.

19. Internship Completion

After successfully completing the internship, students should obtain appropriate completion evidence where available.

Examples include:

- Internship certificate
- Completion letter
- Supervisor evaluation
- Project evaluation
- Offer or engagement documentation

Students may be required to submit these documents to their academic department.

20. Portfolio Use

Students may include internship experience in their professional portfolio when permitted.

A portfolio entry can describe:

Problem: What problem was addressed?

Contribution: What did the student personally work on?

Technology: What tools and technologies were used?

Result: What was achieved?

Learning: What skills were developed?

Confidential information should not be included.

21. Internship Example — AI/ML Student

A student working as an AI/ML intern may be assigned a project to build a document-question-answering system.

The student may work on:

- **PDF text extraction**
- **Data cleaning**
- **Text chunking**
- **Embeddings**
- **Vector databases**
- **Retrieval**
- **LLM integration**
- **API development**
- **User interface**
- **Testing**
- **Deployment**

The student should document which components they personally implemented.

22. Internship Example — Data Analyst

A data analytics intern may work on a sales dashboard.

Possible tasks include:

- **Data cleaning**
- **SQL queries**
- **Exploratory data analysis**
- **KPI calculation**
- **Dashboard creation**
- **Visualization**
- **Business insights**
- **Report generation**

The student should explain how the analysis supports the intended business question.

23. Internship Example — Software Developer

A software development intern may contribute to a web application.

Possible responsibilities include:

- API development
- Database integration
- Frontend development
- Backend development
- Testing
- Git/GitHub workflows
- Bug fixing
- Documentation
- Deployment

Students should understand the architecture of the application and their individual contribution.

24. Professional Skills

An internship is not only about technical skills.

Students should develop:

- Communication
- Teamwork
- Time management
- Problem solving
- Documentation
- Professional email writing
- Meeting participation
- Requirement understanding

- **Feedback handling**
-

25. Internship Readiness Checklist

Before starting an internship, students should ideally have:

- **Updated resume**
 - **Professional email address**
 - **Basic programming skills**
 - **Git/GitHub knowledge**
 - **At least one technical project**
 - **Basic communication skills**
 - **Understanding of the internship role**
 - **Portfolio where applicable**
-

26. Final Checklist

Before completing the internship, students should verify:

- **Required duration completed**
 - **Attendance requirements satisfied**
 - **Assigned project completed**
 - **Documentation prepared**
 - **Final presentation completed**
 - **Mentor feedback obtained**
 - **Completion certificate/letter obtained where applicable**
 - **Academic submission completed**
 - **Confidential information removed from public materials**
-

27. Quick Reference

Topic	Guideline
Minimum completed semesters	4 semesters
Standard minimum duration	6 weeks
Mentor	Recommended/assigned by host
Faculty coordinator	Where institution requires
Weekly progress	Recommended
Final documentation	Required where applicable
Confidential information	Must be protected
Portfolio publication	Only permitted information
Completion evidence	Certificate/letter/evaluation where applicable
End of Document
